Email: gy23@uw.edu | Phone: 206-669-8613  
Address: 1128 NE 41ST Street, Seattle, WA 98105

## Education

### University of Washington

B.S., Aeronautics & Astronautics Engineering  
Cumulative GPA: 3.89/4.00

Seattle, WA

Sep. 2018 – Jun. 2022 (Anticipated)

## Research Experience

### Laboratory of Engineered Materials and Structures, UW

Seattle, WA

*Undergraduate Research Assistant & Summer Intern (Advisor: Professor Jinkyu Yang)*

*Jun. 2020 – Present*

- Studying unique wave dynamics in mechanical metamaterials.
- Conducting an independent project mentored by a PhD student to investigate the wave dispersion relation of one-dimensional origami chain composed out of Kresling origami and/or Yoshimura origami.
- Performing theoretical studies by Python, including static analysis on origami unit cell and dynamic analysis on the wave dispersion relation of the origami chain.
- Fabricated origami unit cells, conducted compression tests, and contributed to the experimental study of the wave dispersion relation.
- Submitted & presented research result in AIAA Region VI Student Conference undergraduate category and awarded 2<sup>nd</sup> place.

## Publications

†Equally contributed author

2. Y. Miyazawa<sup>†</sup>, **G. Yin**<sup>†</sup>, R. Chaunsali, G. Theocharis, J. Yang, “Tunable topological insulator in origami lattice,” (in preparation).
1. Y. Miyazawa, C. Chen, T. Gormley, R. Chaunsali, **G. Yin**, G. Theocharis, J. Yang, “Tunable dispersion and topological state transfer in origami lattice,” (to be submitted).

## Conference Proceeding

1. **G. Yin**, “An Origami-based System for Frequency Bandgap Tuning,” *AIAA Region VI Student Conference*, Long Beach, California, April, 2021.

## Conference Presentation

†Presenter

1. **G. Yin**<sup>†</sup>, “An Origami-based System for Frequency Bandgap Tuning,” *AIAA Region VI Student Conference*, Long Beach, California, April, 2021.

## Academic Projects

### Nature-inspired Topological Interlocking

Seattle, WA

*UW A&A junior team project (Group of 4; Advisors: Dr. Ed Habtour & Dr. Erik Hurlen)*

*Mar. 2021 – Jun. 2021*

- Studied the effects of element-spacing and material hardness on the motion of a topological-interlocking structure; manufactured a topological-interlocking structure prototype emulating snake-vertebrate system.
- Individually created a nonlinear mathematical model to study the dynamics of the structure.
- Conducted theoretical analysis on the dynamics of the structure in MATLAB.
- Designed experiments to evaluate the mathematical model and developed testing plans to instruct the department faculty to execute the experiments.
- Orally presented in front of the whole class and submitted a final report.
- Peer evaluation 10/10 & top grade.

## Aerospace Laboratory

Seattle, WA

*UW A&A junior course team work (Group of 4)*

*Jan. 2021 – Mar. 2021*

- Strengthened the understanding of fundamental principles of aerodynamics, structures, vibrations, material properties, and propulsion through experimental learning.
- Gained experience of the use, the calibration, and the measurement techniques of facilities such as wind tunnel, strain gauge, Dillon Testing Machine, accelerometer, etc.

## Vortex Panel Mini-Project

Seattle, WA

*UW A&A junior course independent project*

*Feb. 2021 – Mar. 2021*

- Learned how to use XFOIL to design and analyze airfoils.
- Simulated four different NACA airfoils under viscous effects and obtained corresponding aerodynamic coefficient data at different angles of attack.
- Plotted the obtained coefficient data in MATLAB and made comparative evaluation of the advantages of each type of airfoil.

## Aerospace Instrumentation

Seattle, WA

*UW A&A junior course independent work*

*Sep. 2020 – Dec. 2020*

- Studied analytical and practice-oriented electronics tools and their applications in aerospace engineering, including Ohm's law, Kirchhoff's Laws, DC and AC circuits, electronic components, op-amps, and data acquisition.
- Designed, constructed, and tested practical circuits.
- Implemented circuit control via Arduino microprocessor and MATLAB Simulink.

## Technical Skills

---

**Programming & Softwares:** MATLAB, Python, Java, R, Abaqus, Arduino, Mathematica, XFOIL, LaTeX

**CAD:** SolidWorks

**Fabrication:** Laser-cutting

## Leadership

---

**Foundation for International Understanding Through Students, UW**

Seattle, WA

*Facilitator*

*Nov. 2018 – Jun. 2019*

- Facilitated intercultural events such as campus tours, orientations, and conversation groups for international students.

## Awards

---

**Undergraduate Research Competition, 2<sup>nd</sup> Place, AIAA - Region VI Student Conference**

Apr. 2021

**Research Experiences for Undergraduates (REU) Fellowship, NSF**

Summer 2020

**Dean's Lists, UW**

2018 – Present

## Membership

---

**AIAA Student Membership**

2021
